The network has zero transaction fees and conducts approximately 2,000 transactions per second. The implementations of TRON require minimal transaction fees in order to prevent malicious users from performing DDoS attacks for free. In this respect, EOS.IO and TRON are quite similar, due to the negligible fees, high transactions per second, and high reliability, and as such are regarded as a new generation of blockchain systems. Michael Borkowski, Marten Sigwart, Philipp Frauenthaler, Taneli Hukkinen and Stefan Schulte defined TRON as an Ethereum clone, with no fundamental differences."
